

Vidhya v

Full-stack developer with expertise in MERN & MEAN stacks, specializing in building scalable web applications. Proficient in React.js, Node.js, and MongoDB, with hands-on experience in API development, payment integration, and real-time data handling. Passionate about optimizing user experience and ensuring high-performance applications.

WORK EXPERIENCE

OCEAN ACADEMY

Software developer

Feb 2023 - Present

- Developed dynamic web applications using **React.js, Node.js, and MongoDB**, improving user experience and performance.
- Led API integrations, ensuring seamless communication between front-end and back-end systems.
- Optimized database queries and application load times, enhancing scalability and efficiency.
- Implemented authentication and authorization mechanisms using **Firebase and JWT**.

UYARCHI SOLUTIONS (P) LTD

Web developer

Jul 2022 - Jan 2023

- Built responsive, interactive web applications using **Angular, Node.js, and MongoDB**.
- Developed RESTful APIs to support mobile and web applications.

EDUCATION

Perunthalaivar Kamarajar Institute of Engineering and technology, karaikal.

Bachelor of Technology (B.Tech) in Information Technology. - 7.3

2017 - 2021

Manimegalai government girls hr.sec.school.

HSC - 72

2017

Government High school.

SSLC - 94

2015

WEB DESIGNING LANGUAGES

- HTML
- CSS
- Javascript
- Bootstrap
- SASS
- Tailwind css

PROGRAMMING LANGUAGES

- Nodejs
- Python

DATABASE

- MongoDB
- MySQL

PROJECTS

TECHFEST'25

Developed a web application for TechFest 2025, featuring two panels: User and Admin. The User panel allows participants to register for events, make payments via Razorpay, and receive real-time updates. The Admin panel enables event management, user tracking, and payment monitoring. Leveraged MongoDB for data storage, React for an interactive front-end, and Node.js with Firebase for secure authentication and real-time updates. Ensured a seamless user experience with responsive design, optimized performance, and secure transactions.

Technologies used: MERN Stack. React js. Nodejs. HTML, CSS, Tailwind. JavaScript. MongoDB. Firebase.

OA JOB PORTAL

As a key team member in developing the OA Job Portal, I built and enhanced the front end with React.js for a seamless, responsive user experience. On the back end, I used Express.js, Firebase (real-time database), and MongoDB for data management. I implemented user authentication, job posting, dynamic search, and payment integration while ensuring performance optimization, cross-browser compatibility, and adherence to SOLID principles.

Technologies used: MERN Stack. React js. Nodejs. HTML, CSS, Tailwind. JavaScript. MongoDB. Razorpay. Firebase.

GREEN PUDUCHERRY

As a MERN stack developer for the Green Puducherry project, I built dynamic, responsive UIs with React and developed server-side logic using Node.js with MongoDB. I created RESTful APIs for the mobile app, ensuring seamless front-end and back-end communication. Additionally, I optimized performance, enhanced security, and collaborated with the team to refine the user experience.

Technologies used: MERN Stack. React js. Nodejs. HTML, CSS, Tailwind. JavaScript. MongoDB. Firebase.

ADMIN MANAGEMENT PORTAL

I contributed to the end-to-end development of this project, designed for Ocean Academy to streamline operations. The system manages student workflows, including admissions, inquiries, courses, attendance, and certification maintenance. My role involved developing key modules, creating a responsive user interface, and implementing robust back-end logic. I also integrated features to automate administrative tasks and optimized database queries for scalability.

Technologies used: MEAN Stack. Angular. Nodejs. HTML, CSS, Bootstrap. JavaScript. MongoDB. Firebase.
